Product Requirements Document (PRD)

Project Name: iConnect – Unified Social Super App
Prepared By: Temitope Soremekun (dhemmex)
Date: Nov 30, 2025

---

1. Executive Summary

iConnect is an all-in-one mobile application that unifies messaging, content creation, job hunting, social networking, dating, and investing, integrating top platforms such as WhatsApp, Instagram, Facebook, LinkedIn, Telegram, Snapchat, Twitter (X), and YouTube into a seamless experience. It leverages AI and Web3 technologies to enhance personalization, privacy, and productivity.

---

2. Goals & Objectives

- Merge major social media functions into one streamlined platform.
- Enable cross-platform content posting and unified messaging.
- Integrate AI-driven assistance and content generation.
- Provide job search, dating, and investment tools inside one app.
- Support platform-specific and universal social actions.

---

3. Target Audience

- Age: 18–99

- Location: Nigeria (primary), global (secondary)
- **User Types:** Everyday social users, content creators, professionals, crypto users, investors, Ajo users, digital nomads.

---

4. Features & Functional Requirements

4.1 Onboarding

- Account creation (Email/Phone, Google, Apple)
- Connect social media accounts (WhatsApp, Telegram, etc.)
- Select interests (e.g., Jobs, Content Creation, Dating, Crypto)
- Setup basic profile (name, avatar, short bio)

4.2 Home Feed

- Unified timeline from all connected platforms
- Filter by platform (e.g., X, IG, Facebook)
- Like, comment, share, save, open on native platform
- Sort by newest, trending, or AI-recommended

4.3 Chat

- Unified inbox showing messages from Telegram, WhatsApp, Snap
- Platform tabs & central inbox option

- Start chat, send text, emoji, voice notes, media

- Video/audio calling support per platform capability

4.4 Create Content

- Upload: photo, video, reels, blogs
- Caption & hashtag input
- Select platforms to post to
- AI-generated caption suggestions
- Schedule or post instantly

4.5 Job Hub

- Aggregated jobs from LinkedIn, Facebook, X
- Filters by location, industry, remote
- Save, share, or apply via auto-filled CV
- AI-generated cover letters & resume tips

4.6 Date/Connect

- Swipe-style or grid matching interface
- Filters: gender, interests, goal (dating vs network)
- Match confirmation → chat option
- View match's social handles (if public)

4.7 Invest (Updated)

- Users can create an **iConnect Wallet** or connect an **external wallet**.

- Supported external wallets:

    - MetaMask

    - Trust Wallet
    - Binance Wallet
    - Pi Wallet (optional)
    - WalletConnect
- Join or create Ajo savings groups.
- View investment dashboard: crypto, stocks, Ajo.
- Withdraw, deposit, transfer funds.
- Gas fee tutorials for Web3 actions.

Fallback options if wallet linking fails.

4.8 AI Assistant

- Chat interface for real-time assistance
- Generate content, bios, messages, statuses
- Summarize job posts or profiles
- Suggest networking tips or investment insights

4.9 Profile & Settings

- Manage connected accounts
- Edit profile, privacy, notification preferences

- Wallet settings & transaction history
- Account deletion, help center

---

5. Information Architecture (IA)

- Onboarding
- Home
    - Feed
    - Chat
    - Create
    - Job Hub
    - Date
    - Invest
    - AI Assistant
- Profile

---

6. User Flows (High-Level)

- Onboarding → Setup → Home

- Home → [Chat | Create | Job | Date | Invest | AI | Profile]
- Chat → Message → Respond → Call
- Create → Upload → Post → Schedule
- Job → View → Apply → Track
- Date → Match → Chat → Connect
- Invest → Wallet → Save/Invest → Withdraw
- AI → Ask → Generate → Save or Apply

Additional User Flow – Wallet

- Choose **Create Wallet** or **Connect Existing Wallet**
- Approve wallet permissions
- Load balances, tokens, transactions
- Deposit/Withdraw/Transfer
- Buy/Sell crypto
- Ajo group actions
- Error fallback: “Reconnect Wallet” banner

---

7. Non-Functional Requirements

- Platform: Android, iOS
- Localization: English (default), Yoruba/Hausa/Igbo (later)
- Data: Encrypted chat & wallet data
- Performance: ≤2s loading time for all views
- Scalability: Support millions of users

---

8. Timeline (Suggested for MVP)

Phase	Duration
Research & IA	2 weeks
UX/UI Design	3 weeks
Prototyping	1 week
Testing & Review	1 week
Total	7 weeks

---

9. KPIs for Success

- 5,000 downloads within 3 months
- 40% daily active user rate
- Average session time > 5 minutes
- 1000+ content posts/week

- 80% onboarding completion rate

---

10. Tools & Handoff

- Design Tool: Figma
- Prototyping: Figma/Framer
- Handoff: Zeplin or Dev mode (Figma)
